Research. Huang, G.H., Korfiatis, N. and Chang, C.T. (2018). Mobile Shopping Cart Abandonment: The roles of Conflicts, Ambivalence, and Hesitation. *Journal of Business Research*, 85, 165-174.

revealed that so-called shopping cart abandonment represented a significant challenge for online retailers.

Although mobile apps have become one of the most popular ways to shop online, and ecommerce retailers continue to invest heavily in new apps, rates of shopping cart abandonment are much higher for mobile-based shopping than for desktop-based shopping.

One of the researchers, Dr Nikolaos Korfiatis, of Norwich Business School at UEA, said that the study revealed a paradox? about online shopping.

He added: Mobile shopping is supposed to make the process easier, and yet concerns about making the right choice, or about whether the site is secure enough leads to an emotional ambivalence about the transaction. That mean customers are much more likely to simply abandon their shopping carts without completing a purchase.
