However, only 27 per cent of purchases initiated on this channel were finalised and conversion rates significantly lagged behind desktop initiated purchases, they said.

Researchers at the University of East Anglia (UEA) in the UK found that it represents a huge challenge for online retailers, who are investing heavily in mobile shopping, but not reaping the rewards in successful sales.

"Our study results revealed a paradox," said Nikolaos Korfiatis, of Norwich Business School at UEA.

"Mobile shopping is supposed to make the process easier, and yet concerns about making the right choice, or about whether the site is secure enough leads to an 'emotional ambivalence' about the transaction - and that mean customers are much more likely to simply abandon their shopping carts without completing a purchase," Korfiatis said.

The researchers studied online shopping data from 2016- 2017 from consumers in Taiwan and the US.

They found that the reasons for hesitation at the checkout stage were broadly the same in both countries.
