SECTIONS Shopaholics anonymous! Here's why shopping on smartphone apps isn't as popular

"Our study results revealed a paradox," said Nikolaos Korfiatis, of Norwich Business School at UEA.

"Mobile shopping is supposed to make the process easier, and yet concerns about making the right choice, or about whether the site is secure enough leads to an 'emotional ambivalence' about the transaction - and that mean customers are much more likely to simply abandon their shopping carts without completing a purchase," Korfiatis said.

The researchers studied online shopping data from 2016- 2017 from consumers in Taiwan and the US.

They found that the reasons for hesitation at the checkout stage were broadly the same in both countries.
