Online shoppers hesitate from buying products on smartphones: Study

E-commerce websites are accessed less on a smartphone, says a study, that claims that users find it hard to completely trust what they see of products online.

on special offers or overlooking hidden costs, according to new research. Concerns about privacy and security can also motivate people to put items into their shopping baskets but then quit without paying, observed the team from University of East Anglia (UEA) in Norwich, England.

"Although mobile apps are rapidly becoming among the most popular ways to shop online, the phenomenon of shopping cart abandonment is much higher than for desktop-based online shopping," the researchers noted. "Mobile shopping is supposed to make the process easier, and yet concerns about making the right choice, or about whether the site is secure enough leads to an 'emotional ambivalence' about the transaction – and that mean customers are much more likely to simply abandon their shopping carts without completing a purchase," explained Dr Nikolaos Korfiatis, of Norwich Business School at UEA.
