Research. Symitsi, E., Stamolampros, P., Daskalakis, G. and Korfiatis, N. (2018). Employee Satisfaction and Corporate Performance in the UK. Study commissioned by Glassdoor, presented at Glassdoor's Best Places to Work, London, 29 March 2018.

It doesn't work the other way: High job satisfaction among employees predicts good corporate performance, but not vice versa—at least for tourism and hospitality firms. That's according to a 2018 study in which Panagiotis Stamolampros, a lecturer at Leeds University Business School, along with colleagues, analyzed Glassdoor data from almost 300,000 employees pertaining to nearly 12,000 tourism and hospitality firms in the United States. "We do not find evidence supporting the reverse relationship, that growth on firm profitability increases job satisfaction." In their study, a one star increase in the overall rating of a company was linked to an increase of return on assets between 1.2 and 1.4 percent. "Our results," Stamolampros said, "show that satisfied employees cite work environment, culture, leadership, and career opportunities as key things their companies offer." This goes beyond the U.S. In another 2018 study, Daskalakis and Stamolampros found the same link, based on Glassdoor data, between high job satisfaction and corporate profits in the United Kingdom. "The human-centered view of the firm," they wrote, "is the appropriate one not only in the U.S, but also in the U.K."
